Skills

Vision

- Real-time image processing
- Image processing techniques
- Object detection methods
- Computer vision libraries

Deep learning

- Deep learning algorithms
- Convolutional neural networks
- Recurrent neural networks
- Transfer learning techniques

Data

- Data annotation tools

Working style

- Teamwork and collaboration
- Problem-solving
- Positive attitude

Languages

- English
- Upper intermediate · B2

Mahdi Mashayekhi

Junior Computer Vision Engineer

Professional summary

Associate's degree candidate in Computer Engineering with strengths in teamwork, problem-solving and real-time image processing. Skilled in computer vision libraries, deep learning algorithms, object detection methods and data annotation tools.

Professional experience

Volunteer Computer Vision Developer

Current

08/2025 – Present

Remote

- Work on computer vision tasks built around object detection and real-time image processing.
- Annotate image data and train deep learning models, including CNN-based approaches and transfer learning.
- Collaborate with teammates to solve practical problems in the vision pipeline.

Projects

Automatic Number Plate Recognition

Detects vehicle license plates in images and video and reads the plate text.

Object detection

OCR

Real-time

Highway Vehicle Speed Estimation

Detects and tracks vehicles on a highway and estimates the speed of each one.

Object detection

Tracking

Video analysis

Education

Associate's Degree, Computer Engineering

Expected 12/2026

Shamsipour Technical and Vocational College, Tehran

Accomplishments

National rank

68

Associate Degree Entrance Exam, Computer major

Issued by Iranian Technical and Vocational University (TVU) | Sanjesh Organization, Aug 2024
